

• Maleeha Naveed | Software Engineer (Blockchain)

▪ [Email](#) ▪ [Github](#) ▪ [LinkedIn](#) ▪ [Telegram](#) ▪ [Contact No](#) Lahore, Pakistan (UTC +5:00)

Software Engineer with over 5 years of comprehensive experience within the blockchain ecosystem. My technical expertise centers on Solidity, DeFi & L2 protocols, DEX's, Dapps, Oracles, smart contracts, and auditing. I am proficient in JavaScript/Node.js and NoSQL for backend integration and custom tooling. I prioritize gas optimization, rigorous edge-case analysis, and secure deployment workflows. My development process emphasizes contract readability and audit-readiness.

Key Achievements

- Led development of a non-custodial wallet inspired by **Trust wallet**, focusing on both EVM and Non-EVM chains, ensuring maximum user control and security.
- Engineered with a secure client-side key mechanism to ensure zero storage of private keys on the server or in local storage, guaranteeing non-custodial status for a custom wallet.
- Led the end-to-end development of the DTVC for **Delnorte** from designing the initial smart contract architecture to successfully navigating a rigorous security audit by **Hashlock** and listing on **MEXC exchange**.

Technical Skills

- **Languages:** Python, Solidity, JavaScript, C/C++, NodeJS, NOSQL, React
- **Database:** MongoDB, Chainlink
- **Blockchain:** Experienced with ERC-20 tokens, ERC-721, ERC-3643, ERC-4337 and others, NFTs, IPFS, MetaMask, Web3.js, Ethers.js, Alchemy, Infura, Moralis
- Elliptic Curve Digital Signature Algorithm (ECDSA) for signing and to verify transactions, smart contract interactions, and message authentication
- Understanding of Decentralized Finance (DeFi) Protocols, flash loans, Routers, Dex's, UniswapV2, OneInch, smart contract vulnerabilities, Reentrancy, Access control, AaveV3
- **Tools:** Git, RemixIDE, Hardhat, Slither

Experience

[Astra Protocol](#) | Senior Blockchain Developer | Aug 2025 – Mar 2026

- **Core Wallet Architecture:** Led development of a non-custodial wallet, focusing on both EVM and Non-EVM chains, ensuring maximum user control and security.
- **Cryptographic Key Management:** Engineered with a secure client-side key mechanism to ensure zero storage of private keys on the server or in local storage, guaranteeing non-custodial status.
- Implemented logic for the initial generation and derivation of Mnemonic Phrases and Private Keys for both EVM and Solana wallets. Designed the retrieval method to re-derive/decrypt private keys solely on the client side during transaction signing.
- **1inch Protocol Integration:** Implemented the 1inch API for efficient, aggregated swap execution across various EVM networks.
- **Uniswap Protocol Integration:** Integrated Uniswap for direct access to decentralized exchange functionality.
- **Fiat On-Ramping:** Integrated MoonPay API to provide users with direct fiat-to-crypto on-ramping capabilities within the wallet.
- **Real-Time Data Feeds:** Fetched and displayed live cryptocurrency pricing and market data by integrating CoinMarketCap APIs.

[Delnorte Terra Vision](#) | Solidity Blockchain Developer | Mar 2025 – Jun 2025

- **Token Creation & Launch:** Designed and developed two custom tokens, DTVC and DTV, for internal and external use, including the Auditing from HashLock and successful launch of DTVC on the MEXC exchange.
- **Auditing:** Identified and mitigated vulnerabilities through rigorous security audits and architectural considerations, ensuring the integrity and resilience of the platform.
- **CRM:** Developed and deployed 8-9 Solidity smart contracts to the Ethereum Mainnet for CRM of DelNorte, ensuring robust and secure solutions for the system.
- **Frontend Integration:** Integrated deployed contracts with frontend application, ensuring seamless user interaction and

functionality.

- **Impact on Government Data:** Played a role in developing solution aimed at revolutionizing how public sector data is handled, utilizing AI and blockchain for enhanced accountability. This involved clear communication with client throughout the development lifecycle, including document review to ensure alignment with project requirements.

[Aimetk](#) | Senior Blockchain Developer | Nov 2024 – Feb 2025

- Contributed to the development of XperiencePay, a blockchain-integrated e-commerce platform that focuses on luxury transportation items (yachts, private jets, high-end automobiles), wholesale goods, and rare collectibles/art.
- Developed and deployed smart contracts to enable secure transactions, token integration, and governance mechanisms.
- Integrated and interacted with the DeFi protocol Uniswap V3 for swapping tokens, supporting nearly 10 different cryptocurrencies for seamless exchange. I also integrated decentralized oracles like Chainlink to obtain real-time price feeds, ensuring accuracy and reliability in transactions
- Collaborated on innovative solutions to revolutionize e-commerce using blockchain technology.

[Invoicemate](#) | Senior Blockchain Developer | Mar 2024 – Oct 2024

- Built decentralized credit protocol with efficient and secure KYI (know your investor) for invoice financing, turning verified and risk-scored invoices in financial instruments for secure and attractive short-term loans, allows for crypto borrowing without crypto collateral.
- Designed and Built the Governance Token DEFA for InvoiceMate's lending pools.
- Integrated smart contracts and implemented multi wallet integration with the frontend across various blockchain networks (BSC,Arbitrum, HAQQ, IOTA), ensuring seamless interaction between the blockchain and the user interface.

[Bloctech Solutions](#) | Blockchain Developer | Mar 2021 – Jan 2024

- Gain Experience in DeFi, Cryptocurrency and Smart Contract development
- Gain Experience in Presale, Staking, multi-staking, ROI, Reflection Token, Stablecoins, referral system, chain referral system, and NFTs
- Developed different Dapps like staking platforms, NFT marketplaces, and ICOs by using different frameworks like Hardhat & Remix IDE on different EVM compatible blockchains Platforms Like Ethereum and Binance.
- Gain deep understanding of Solidity, contract security best practices, gas optimization, and upgradability patterns.
- Gain deep understanding of blockchain architecture, consensus mechanisms, financial markets and cryptographic concepts, crucial for navigating the intricacies of decentralized systems.

Education

Professional Qualifications and Certifications

- Python For Everybody Specialization – University of Michigan | Coursera
- Blockchain Basics |Great Learning
- Decentralized Finance: The Future of Finance Specialization – Duke University | Coursera
- Cybersecurity Specialization | Google
- Blockchain Revolution in Financial services | Coursera

Academic Education

- **Government College University, Faisalabad, Pakistan | 2019-2023**

BS in Software Engineering
CGPA - 3.55/4.0
